III. DESCRIPTION

A. Background

The City has been working toward completion of a SWIF to address deficiencies that the USACE has noted in the flood protection system through Minot. These deficiencies are items that need to be addressed to bring the flood control system to the current USACE standards. This project removed trees within the levee footprint or within the channel banks, repaired major and minor erosion areas that may jeopardize the levee integrity and corrects deficiencies in storm sewer pipes that penetrate the levee. Wagner Construction was the low bidder for the project, and they have completed all items remaining for this part of the project.
